

Zion Capital Treasury Policy

Version 3.0 – Effective April 2026

Zion Assets • ZCAP Treasury-Backed Membership Token

1. Mission

Zion Capital exists to build a transparent, treasury-backed membership ecosystem centered around real digital asset reserves, disciplined capital management, and long-term value creation.

The ZCAP token is not designed to operate as a purely speculative meme asset. Instead, ZCAP is intended to function as a treasury-backed membership token that gives holders exposure to a growing reserve base, ecosystem participation, governance opportunities, and premium membership privileges.

The long-term objective of Zion Capital is to create a self-sustaining digital treasury model where reserves, revenue, yield generation, and community participation reinforce one another.

2. Core Principles

Zion Capital shall operate according to the following principles:

1. Transparency
2. Sustainability
3. Treasury Preservation
4. Long-Term Growth
5. Controlled Risk Management
6. Public Accountability
7. Community Alignment
8. Disciplined Capital Allocation

All treasury holdings, wallet addresses, reserve balances, and major treasury actions will be publicly viewable and verifiable on-chain.

3. Token Overview

Token Name: Zion Capital Treasury-Backed Membership Token

Token Symbol: ZCAP

Blockchain: Solana

Token Standard: SPL Token-2022

Decimals: 6

Maximum Supply: 1,000,000 ZCAP

Additional Minting: Not permitted unless approved by governance

ZCAP is intended to represent access to the Zion Capital ecosystem and indirect exposure to the growth of treasury reserves.

4. Supply Allocation

Category	Allocation	Amount
Treasury Reserve	50%	500,000 ZCAP
Founder / Team Reserve	30%	300,000 ZCAP
Operations	3%	30,000 ZCAP
Community Reward	7%	70,000 ZCAP
Community + Initial LP	10%	100,000 ZCAP
Total Supply	100%	1,000,000 ZCAP

Treasury Reserve Rules

The Operations allocation is intended for day-to-day company expenses, service providers, software costs, treasury administration, and execution of approved business activities.

The Community Reward allocation is intended for loyalty incentives, staking rewards, referral programs, airdrops, contests, ambassador campaigns, governance incentives, and future membership benefits.

Operations and Community Reward allocations should be subject to transparency standards and periodic public reporting.

Treasury Reserve Rules

The Treasury Reserve is intended to support:

- Long-term treasury growth
- Strategic treasury-backed buybacks
- Community incentives
- Future staking or rewards programs
- Future partnerships and ecosystem expansion
- Strategic liquidity support

Treasury Reserve tokens may not be sold recklessly into the market.

Any movement of more than 5% of the Treasury Reserve in a rolling 30-day period should require governance review and public disclosure.

Founder / Team Reserve Rules

Founder and team allocations are intended to align long-term incentives between Zion Assets and the broader ZCAP ecosystem.

Founder allocations should be vested over time and should not be rapidly sold into the market.

Recommended vesting schedule:

- 12-month cliff
- 36-month linear vesting thereafter

The Founder Reserve may only be used for:

- Core development
- Treasury management
- Marketing and ecosystem growth
- Strategic hires and advisors
- Business operations

5. Treasury Asset Allocation Targets

The Zion Capital treasury should maintain diversified exposure across multiple asset classes.

Asset Class	Target Allocation	Purpose
Stable Assets (USDC + yield stables)	40%	Liquidity, stability, and downside protection
Core Crypto Reserves (wBTC, wETH, LINK, WLF, UNI, AAVE, PUMP, JUP, CAKE)	30%	Long-term appreciation
Solana Ecosystem Assets (SOL + staking)	20%	Network alignment and staking yield
DeFi Yield / Liquidity Strategies	10%	Additional yield generation

Treasury allocations may shift over time depending on market conditions, volatility, liquidity needs, and governance decisions.

However, Zion Capital should generally prioritize treasury stability over aggressive speculation.

6. Treasury Growth Mechanisms

The treasury is expected to grow through several mechanisms:

6.1 Transfer Fees

A transfer fee of approximately 1.5% may be applied to ZCAP transactions.

The majority of transfer fees should be routed to the treasury.

Transfer fee proceeds may be allocated toward:

- Treasury growth
- Community incentives
- Buybacks
- Liquidity support
- Strategic operations

6.2 Protocol Revenue

Zion Assets may operate businesses, products, services, consulting offerings, membership programs, trading products, educational services, digital subscriptions, or other revenue-generating activities.

A portion of protocol revenue may be directed into the Zion Capital treasury.

6.3 Yield Generation

Treasury assets may be deployed into:

- SOL staking
- Liquid staking strategies
- Stablecoin lending
- Conservative DeFi yield opportunities
- LP incentives
- Treasury management products

All yield strategies should prioritize security, liquidity, and capital preservation.

6.4 Strategic Appreciation

The treasury may benefit from long-term appreciation in reserve assets such as:

- SOL
- BTC
- ETH
- LINK
- WLFI

- UNI
 - AAVE
 - PUMP
 - JUP
 - CAKE
 - Other approved ecosystem assets
-

7. Treasury Risk Controls

Zion Capital shall follow strict treasury risk rules.

Prohibited Activities

The treasury should not engage in:

- Excessive leverage
- High-risk derivatives
- Illiquid meme coins
- Unsecured loans
- Excessive concentration in a single asset
- Anonymous third-party custody
- Unverified DeFi protocols
- Unmanaged bridge risk

Exposure Limits

Recommended treasury exposure limits:

- No more than 40% in any single non-stable asset
- No more than 15% in any single DeFi protocol
- No more than 10% in any single LP strategy
- At least 20% of treasury assets should remain liquid at all times

Emergency Treasury Protections

If markets experience extreme volatility, Zion Capital may:

- Increase stablecoin allocations
 - Pause new treasury deployments
 - Reduce LP exposure
 - Halt discretionary spending
 - Delay buybacks
 - Shift funds into cold storage
-

8. Governance Structure

Zion Capital intends to use DAO governance powered by Realms on Solana.

Voting Eligibility

Tier	Requirement	Rights
Basic Holder	Any amount of ZCAP	Community access
Active Member	990+ ZCAP	Governance voting
VIP / Elite	2,500+ ZCAP	Enhanced governance influence

Governance Proposal Categories

Governance proposals may include:

- Treasury allocation changes
- New reserve assets
- Buyback programs
- Revenue distribution models
- Liquidity adjustments
- Strategic partnerships
- Membership structure updates
- Treasury policy amendments

Major proposals should require:

- Minimum discussion period
- Public disclosure
- Voting threshold
- Multi-signature execution

9. Multisig & Treasury Security

The Zion Capital treasury should be secured using a multi-signature wallet structure.

Recommended setup:

Cold Treasury

- Long-term reserves
- Higher signature threshold
- Minimal movement
- Primary reserve storage

Hot Operations Wallet

- Day-to-day operations
- Smaller balances
- Lower signature threshold
- Short-term spending and payments

Recommended Multisig Thresholds

- Cold Treasury: 3-of-5 or 4-of-7
- Operations Wallet: 2-of-3 or 3-of-5

All major treasury actions should be documented and publicly disclosed.

10. Buybacks & Redemption Framework

As treasury size and liquidity increase, Zion Capital may implement buyback programs.

Potential buyback objectives include:

- Reducing circulating supply
- Supporting market confidence
- Increasing backing per token
- Rewarding long-term holders
- Stabilizing price during periods of weakness

Buybacks may be funded using:

- Transfer fees
- Treasury yield
- Protocol revenue
- Excess treasury reserves

Repurchased tokens may be:

- Burned permanently
- Moved into treasury reserve
- Reallocated to rewards programs
- Used for future incentives

No redemption guarantee is provided unless formally approved and publicly announced.

11. Transparency Requirements

Zion Capital commits to maintaining a high level of transparency.

The following should be publicly available:

- Treasury wallet addresses
- Token reserve addresses
- Treasury balances
- Asset allocation reports
- Quarterly treasury summaries
- Major treasury movements
- Governance proposals
- Buyback activity

A live treasury dashboard should remain available whenever possible.

12. Benefits to Holders

ZCAP holders may benefit from:

- Growing treasury reserves
- Increasing backing per token
- Governance rights
- Membership access
- Early access to products and services
- Potential future buybacks
- Increased ecosystem participation
- Community status and privileges

Long-term holders may benefit most if treasury assets grow over time.

13. Benefits to Zion Assets

The Zion Capital ecosystem also creates benefits for Zion Assets.

These include:

- Sustainable treasury growth
- Stronger community retention
- Better alignment between holders and the company
- More stable long-term funding
- Additional revenue opportunities
- Increased brand value
- Enhanced ecosystem credibility
- Stronger capital base for future expansion

The success of Zion Assets and the success of ZCAP should reinforce one another.

14. Future Roadmap

Potential future developments may include:

1. DAO governance launch
 2. Squads multisig deployment
 3. Treasury dashboard expansion
 4. Staking programs
 5. Membership portal access
 6. Buyback engine
 7. Treasury-backed yield products
 8. Real-world business integrations
 9. Strategic reserve diversification
 10. Premium member-only products and services
-

15. Final Statement

Zion Capital is designed to be more than a token.

It is intended to become a treasury-backed digital membership ecosystem where transparency, disciplined treasury management, community participation, and long-term growth all work together.

The long-term vision is to create a system where Zion Assets, ZCAP holders, and the broader community benefit from a growing treasury and a stronger ecosystem.
