

Zion Capital Treasury Policy

Version 3.0 – Effective April 2026

By ZionAssets.com • ZCAP Treasury-Backed Membership Token

1. Mission

Zion Assets exists to build a transparent, treasury-backed membership ecosystem centered around real digital asset reserves, disciplined capital management, and long-term value creation.

The ZCAP token is not designed to operate as a purely speculative meme asset. Instead, ZCAP is intended to function as a treasury-backed membership token that gives holders exposure to a growing reserve base, ecosystem participation, governance opportunities, and premium membership privileges.

The long-term objective of Zion Assets is to create a self-sustaining digital treasury model where reserves, revenue, yield generation, and community participation reinforce one another.

2. Core Principles

Zion Assets shall operate according to the following principles:

1. Transparency
2. Sustainability
3. Treasury Preservation
4. Long-Term Growth
5. Controlled Risk Management
6. Public Accountability
7. Community Alignment
8. Disciplined Capital Allocation

All treasury holdings, wallet addresses, reserve balances, and major treasury actions will be publicly viewable and verifiable on-chain.

3. Token Overview

- **Token Name:** Zion Capital Treasury-Backed Membership Token
- **Token Symbol:** ZCAP
- **Blockchain:** Solana
- **Token Standard:** SPL Token-2022
- **Decimals:** 6
- **Maximum Supply:** 1,000,000 ZCAP
- **Additional Minting:** Not permitted unless approved by governance

ZCAP is intended to represent access to the Zion Capital ecosystem and indirect exposure to the growth of treasury reserves.

4. Supply Allocation

Category	Allocation	Amount
Treasury Reserve	50%	500,000 ZCAP
Founder / Team Reserve	30%	300,000 ZCAP
Operations	3%	30,000 ZCAP
Community Reward	7%	70,000 ZCAP
Community + Initial LP	10%	100,000 ZCAP
Total Supply	100%	1,000,000 ZCAP

Treasury Reserve Rules

The Treasury Reserve is intended to support long-term treasury growth, strategic treasury-backed buybacks, community incentives, future staking or rewards programs, future partnerships and ecosystem expansion, and strategic liquidity support.

Treasury Reserve tokens may not be sold recklessly into the market. Any movement of more than 5% of the Treasury Reserve in a rolling 30-day period should require governance review and public disclosure.

Founder / Team Reserve Rules

Founder and team allocations are intended to align long-term incentives. Founder allocations should be vested over time and should not be rapidly sold into the market.

Recommended vesting schedule: 12-month cliff + 36-month linear vesting thereafter.

The Founder Reserve may only be used for core development, treasury management, marketing and ecosystem growth, strategic hires and advisors, and business operations.

5. Treasury Asset Allocation Targets

Asset Class	Target Allocation	Purpose
Stable Assets (USDC + yield stables)	40%	Liquidity, stability, and downside protection
Core Crypto Reserves (wBTC, wETH, LINK, WLF1, UNI, AAVE, PUMP, JUP, CAKE)	30%	Long-term appreciation
Solana Ecosystem Assets (SOL + staking)	20%	Network alignment and staking yield
DeFi Yield / Liquidity Strategies	10%	Additional yield generation

Treasury allocations may shift over time depending on market conditions, volatility, liquidity needs, and governance decisions. Zion Assets (The Corporation & Subsidiary of Guzzi Management Co. Inc) should generally prioritize treasury stability over aggressive speculation.

5.1 Off-Chain Reserves and Proof of Reserves (PoR)

Zion Assets may hold certain core crypto assets (such as BTC and ETH) on regulated centralized custodians (e.g., Kraken) without wrapping or bridging them to Solana.

All off-chain reserves will be publicly verifiable through periodic Proof of Reserves (PoR) attestations signed by the controlling wallet(s) and published on-chain.

PoR attestations shall include:

- Current balance snapshot from the custodian
- Cryptographic proof of wallet control
- Timestamp and transaction signature on Solana

PoR attestations will be published at least monthly and remain permanently verifiable on-chain. All off-chain reserves are subject to the same risk controls and transparency requirements as on-chain assets.

6. Treasury Growth Mechanisms

6.1 Transfer Fees

A transfer fee of approximately 1.5% may be applied to ZCAP transactions. The majority of transfer fees should be routed to the treasury for treasury growth, community incentives, buybacks, liquidity support, and strategic operations.

6.2 Protocol Revenue

Zion Assets may operate businesses, products, services, consulting offerings, membership programs, trading products, educational services, digital subscriptions, or other revenue-generating activities. A portion of protocol revenue may be directed into the Zion Capital treasury.

6.3 Yield Generation

Treasury assets may be deployed into SOL staking, liquid staking strategies, stablecoin lending, conservative DeFi yield

opportunities, LP incentives, and treasury management products. All yield strategies should prioritize security, liquidity, and capital preservation.

6.4 Strategic Appreciation

The treasury may benefit from long-term appreciation in reserve assets such as core SOL, wBTC, wETH, LINK, WLF1, UNI, AAVE, PUMP, JUP, CAKE, and other approved ecosystem assets.

7. Treasury Risk Controls

Prohibited Activities

Excessive leverage, high-risk derivatives, illiquid meme coins, unsecured loans, excessive concentration in a single asset, anonymous third-party custody, unverified DeFi protocols, unmanaged bridge risk.

Exposure Limits

- No more than 40% in any single non-stable asset
- No more than 15% in any single DeFi protocol
- No more than 10% in any single LP strategy
- At least 20% of treasury assets should remain liquid at all times

Emergency Treasury Protections

In extreme volatility, Zion Assets may increase stablecoin allocations, pause new deployments, reduce LP exposure, halt discretionary spending, delay buybacks, or shift funds into cold storage.

8. Governance Structure

Zion Capital intends to use DAO governance powered by Realms on Solana.

Voting Eligibility

Tier	Requirement	Rights
Basic Holder	Any amount of ZCAP	Community access
Active Member	990+ ZCAP	Governance voting
VIP / Elite	2,500+ ZCAP	Enhanced governance influence

Governance Proposal Categories

Treasury allocation changes, new reserve assets, buyback programs, revenue distribution models, liquidity adjustments, strategic partnerships, membership structure updates, treasury policy amendments.

Major proposals require a minimum discussion period, public disclosure, voting threshold, and multi-signature execution.

9. Multisig & Treasury Security

Recommended setup:

- **Cold Treasury** - Long-term reserves, higher signature threshold, minimal movement
- **Hot Operations Wallet** - Day-to-day operations, lower signature threshold

Recommended Multisig Thresholds: Cold Treasury 3-of-5 or 4-of-7; Operations Wallet 2-of-3 or 3-of-5.

All major treasury actions should be documented and publicly disclosed.

10. Buybacks & Redemption Framework

Buybacks may be funded using transfer fees, treasury yield, protocol revenue, or excess treasury reserves. Repurchased

tokens may be burned permanently, moved into treasury reserve, reallocated to rewards programs, or used for future incentives. No redemption guarantee is provided unless formally approved and publicly announced.

11. Transparency Requirements

Zion Assets commits to maintaining the highest level of transparency. The following shall be publicly available at all times: treasury wallet addresses, token reserve addresses, treasury balances, asset allocation reports, quarterly treasury summaries, major treasury movements, governance proposals, and buyback activity. A live treasury dashboard shall remain available whenever possible.

11.1 Public Treasury & Allocation Addresses

All addresses below are live on Solana Mainnet and fully verifiable on-chain.

Treasury Addresses

Address Type	Public Key
Treasury Wallet	Babmi7XHycqxbgi4m3Rw56PferMeNQNSbkXzJNp5CRV

12. Benefits to Holders

Growing treasury reserves, increasing backing per token, governance rights, membership access, early access to products and services, potential future buybacks, increased ecosystem participation, and community status and privileges.

13. Benefits to Zion Assets

Sustainable treasury growth, stronger community retention, better alignment between holders and the company, more stable long-term funding, additional revenue opportunities, increased brand value, enhanced ecosystem credibility, and stronger capital base for future expansion.

14. Future Roadmap

- 1.DAO governance launch
- 2.Squads multisig deployment
- 3.Treasury dashboard expansion
- 4.Staking programs
- 5.Membership portal access
- 6.Buyback engine
- 7.Treasury-backed yield products
- 8.Real-world business integration

9.Strategic reserve diversification

10.Premium member-only products and services

15. Final Statement

Zion Capital is designed to be more than a token. It is intended to become a treasury-backed digital membership ecosystem where transparency, disciplined treasury management, community participation, and long-term growth all work together.

The long-term vision is developing a self-reinforcing ecosystem in which Zion Assets, Zion Capital ZCAP holders, and the broader community all benefit from a growing treasury and a stronger digital blockchain portfolio.
